

BOOTCAMP DAY 1

Name: Abderrahim Bahraoui

GitHub username: Abduu898

Epitech email: abderrahim.bahraoui@epitech.eu

Date: 21 Sep 2026

SUMMARY

I completed the daily tasks locally and pushed them to a personal GitHub [repository](#). The official delivery to the Epitech GitHub organization could not be completed because my account does not have access to the organization's repositories and no "Configure SSO" option appears on my SSH key settings page.

1. Task 1.1 — Working environment

What I did:

- Opened My page, Microsoft 365, Python help page, Microsoft Teams
- Browsed the local directory in a file manager
- Opened a terminal emulator and typed pwd

```
abdou@MSI:~$ pwd
/home/abdou
abdou@MSI:~$ |
```

2. Task 1.2 — Fireship videos

- Watched "Linux in 100 seconds", "Linux Directories Explained in 100 Seconds", "Bash in 100 Seconds"

What I understood:

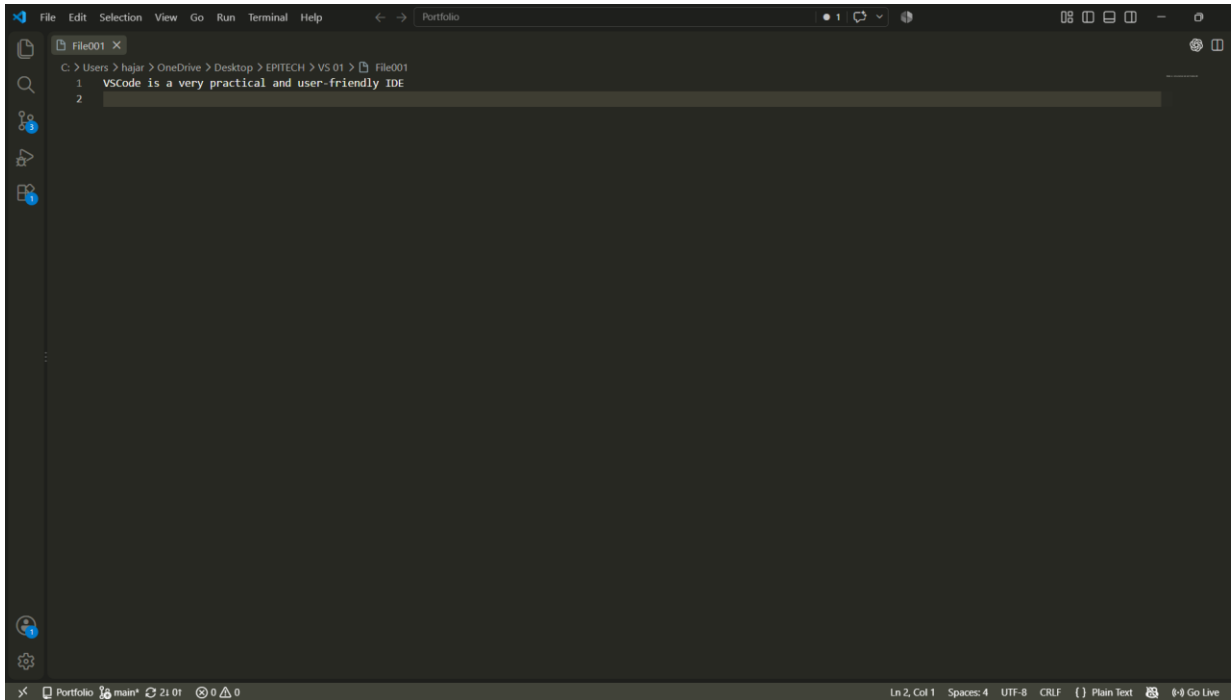

- Linux = kernel; distributions (Ubuntu, Debian...) = kernel + tools
- Bash = shell; terminal = the window; commands = tools

3. Task 1.3 — Text editors

What I did:

- VSCode
- Installed VSCode on Windows
- Created a file with VSCode is a very practical and user-friendly IDE.

- Saved it in a dedicated folder and exited

Nano — A terminal text editor. It shows its shortcuts at the bottom of the screen (e.g. ctrl O to save, ctrl X to exit). And it lets you create a file and type the content directly inside it.

Deliverables

Emacs — an advanced, extensible terminal editor with no modes: you just start typing to insert text. I ran `emacs emacs_file.txt`, typed Emacs is an advanced text editor., saved with `Ctrl + X Ctrl + S`, and exited with `Ctrl + X Ctrl + C`.

Vim — an advanced terminal editor with modal editing. You start in normal mode and press `i` to insert text. I ran `vim vim_file.txt`, pressed `i`, typed Vim is an advanced text editor., then `Esc` and `:wq` to save and quit.

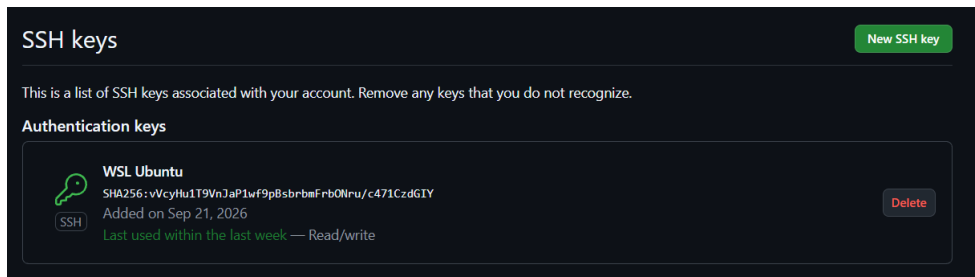

```
abdou@MSI:~/week01$ cat vim_file.txt
Vim is an advanced text editor.
abdou@MSI:~/week01$ |
```

4. Git interlude

- Created GitHub account with Epitech email
- Generated SSH key
- Added the public key to GitHub (Settings → SSH and GPG keys)
- Configured Git identity:

```
git config --global user.name "Abderrahim Bahraoui"
```

```
git config --global user.email "abderrahim.bahraoui@epitech.eu"
```

5. Task 2.1 — Shell navigation

What I did:

```
cd ~/week01
ls
mkdir 01
touch task2.1
mv task2.1 01/
ls 01
```

```
abdou@MSI:~/week01$ ls
01  README.md  emacs_file.txt  task2.2  task2.4  vim_file.txt
abdou@MSI:~/week01$ cd 01
abdou@MSI:~/week01/01$ ls
\task2.1
abdou@MSI:~/week01/01$ |
```

6. Task 2.2

Created task2.2 containing:

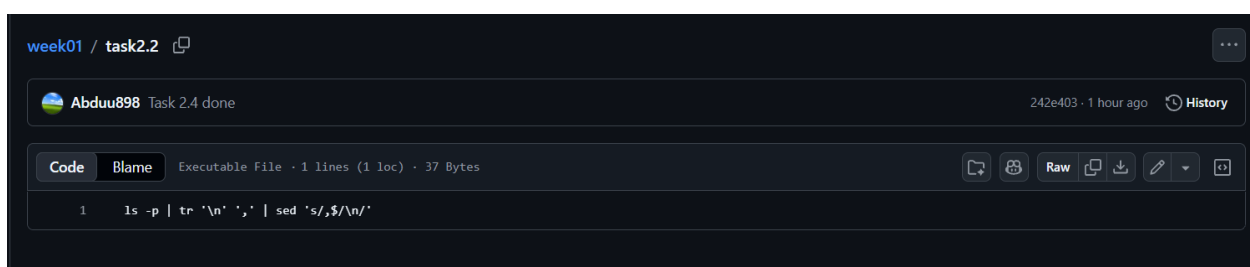

```
ls -p | tr '\n' ',' | sed 's,/$/\n/'
```

Explanation:

ls -p: lists files, sorts alphabetically

tr '\n' ',' : replaces newlines with commas (translate)

sed 's,/\$/\n/' : removes the trailing comma

7. Task 2.3 — Execution permissions

What I did:

chmod a+x task2.2 (a for all – x for execute).

8. Task 2.4 — Folder structure

- Created all directories with mkdir -p "..."
- Created all files with touch "..."
- Added .gitkeep in Soundtracks/ so Git tracks the empty directory

```
abdou@MSI:~/week01$ cd task2.4/
abdou@MSI:~/week01/task2.4$ tree -FQ --charset=ascii .
"/
|-- "Electro"/
|   |-- "Aphex Twin"/
|   |   |-- "Come to Daddy"/
|   |   |   |-- "Bucephalus Bouncing Ball"
|   |   |-- "Fatboy Slim"/
|   |       |-- "You've Come a Long Way, Baby"/
|   |       |   |-- "1-02 - The Rockafeller Skank"
|-- "HipHop"/
|   |-- "Beastie Boys"/
|   |   |-- "Singles"/
|   |   |   |-- "Sabotage-Get It Together"/
|   |   |   |   |-- "Sabotage (LP Version)"
|   |-- "MF DOOM"/
|   |   |-- "Madvillain - Madvillainy"/
|   |   |   |-- "03 - Meat Grinder"
|   |-- "Notorious BIG"/
|   |   |-- "Life After Death"/
|   |   |   |-- "Hypnotize"
|-- "Rock"/
|   |-- "Rage Against The Machine"/
|   |   |-- "Rage Against The Machine"/
|   |   |   |-- "Killing In The Name Of"
|-- "Soundtracks/"
18 directories, 6 files
```

CONCLUSION

All solo-doable tasks completed and committed. GitHub delivery to the Epitech organization is blocked due to missing SSO/org access on my account. All work is available at

<https://github.com/Abduu898/week01>.
