

PYTHON DAY 2

Name: Abderrahim Bahraoui

GitHub username: Abduu898

Epitech email: abderrahim.bahraoui@epitech.eu

Date: 22 Sep 2026

SUMMARY

I completed the daily tasks locally and pushed them to a personal GitHub [repository](#). The official delivery to the Epitech GitHub organization could not be completed because my account does not have access to the organization's repositories and no "Configure SSO" option appears on my SSH key settings page.

1. Task 1.1

What I did:

```
abdou@MSI: ~  
python3 --version  
Python 3.14.4  
abdou@MSI:~$ python3  
Python 3.14.4 (main, Jun 18 2026, 14:25:02) [GCC 15.2.0] on linux  
Type "help", "copyright", "credits" or "license" for more information.  
>>> 1 + 1  
2  
>>> 30+12  
42  
>>> 777+(-735)  
42  
>>> 1+2+3+5+7+11+13  
42  
>>> 8*142
```

2. Task 1.2

```
>>> 84<42  
False  
>>> 0==--(-(0))  
True  
>>> 666!=42  
True  
>>> 2**21  
2097152  
>>> pow(10,3)  
1000  
>>> 9%2  
1
```

3. Task 1.3

What is the difference between $84/2$ and $84//2$?

$84/2$ Returns a float

$84//2$ Returns an int

```
>>> 84/2
42.0
>>> 84//2
42
>>> |
```

VARIABLES

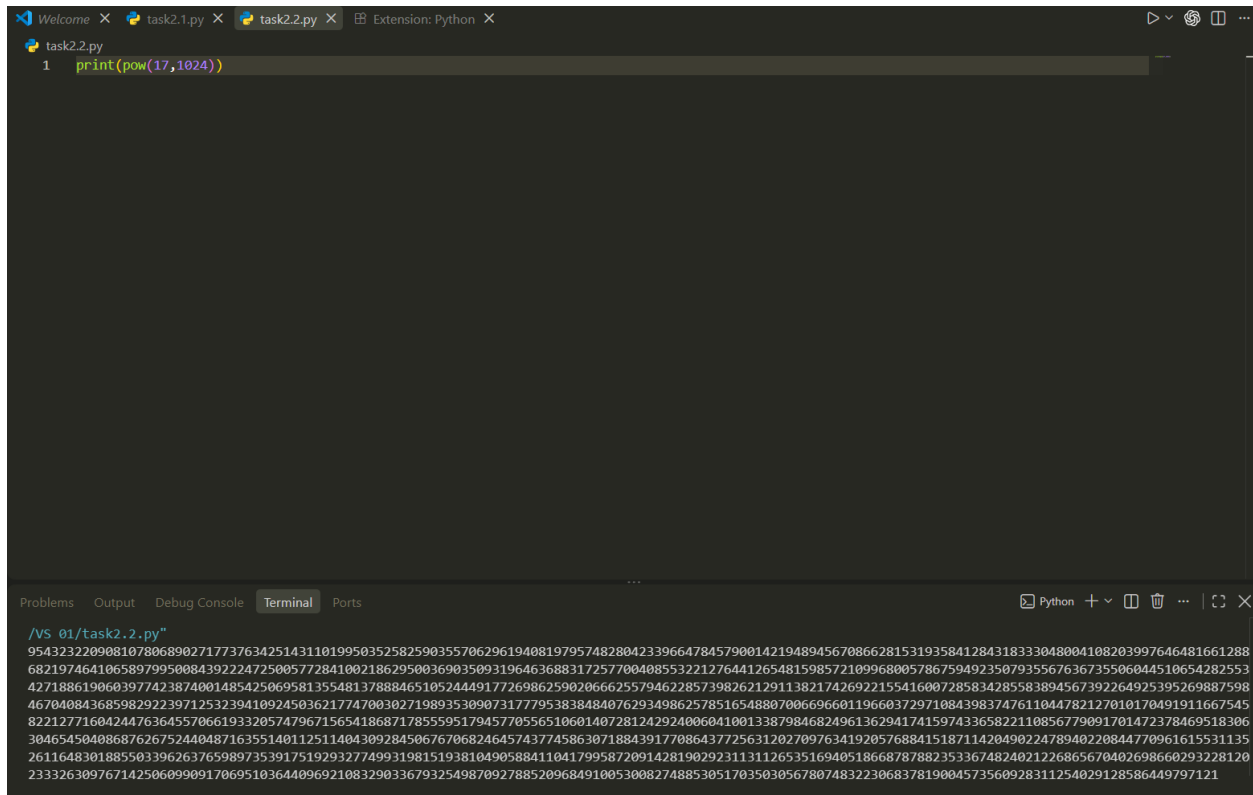

1. Task 2.1

```
task2.1.py > ...
1  total=0
2  current=0
3  i=1
4  while i <= 9:
5      current = current * 10 + 1
6      total=total+current
7      i = i + 1
8
9  print(total)
10 print(pow(total,2))
11 print(pow(total,3))
12 print(pow(total,5))
13
```

Problems Output Debug Console Terminal Ports

```

```

2. Task 2.2

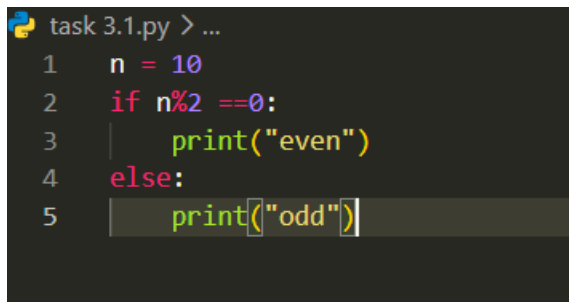

The screenshot shows a VS Code editor with a file named `task2.2.py` containing a single line of Python code: `print(pow(17,1024))`. The terminal at the bottom displays the output of this code, which is a very long number consisting of 320 digits. The terminal output starts with `/VS 01/task2.2.py"` and ends with `2333263097671425060990917069510364409692108329033679325498709278852096849100530082748853051703503056780748322306837819004573560928311254029128586449797121`.

CHALLENGE

- Works for N=20 (result: 232792560), but takes some time and my pc starts screaming.

MODULO

1. Task 3.1

The screenshot shows a Python script in a code editor. The script is named `task 3.1.py` and contains the following code:

```
1 n = 10
2 if n%2 ==0:
3     print("even")
4 else:
5     print("odd")
```

2. Task 3.2

```
n = 123456789
total = 0
while n > 0:
    total = total + n % 10    # add the last digit
    n = n // 10              # remove the last digit

print(total)
```

3. Task 3.3

```
for x in (12.24, 424242.8412):
    print(int(x))
```

4. Task 3.4

```
30
31 for x in (12.24, 424242.8412):
32     print(x - int(x))
```

5. Task 4.1

```
task 4.py > ...
1 total=0
2 sign=1
3 d=1
4 for i in range(1000000):
5     total=total+sign/d
6     sign=-sign
7     d=d+2
8
9 pi=4*total
10 print(round(pi, 6))
```

Problems Output Debug Console Terminal Ports

PS C:\Users\hajar\OneDrive\Desktop\EPITECH\VS 01> & C:\Users\hajar\AppData\Local\VS 01\task 4.py
3.141592

CONCLUSION

I completed all the core tasks of the day) and pushed my code to the repository under day02/. I also solved the challenge by testing both a naive and an optimized version.

However, I could not finish **Task 4.2** . I didn't manage to get the nested formula right, so I left it incomplete.
